The epidemiological data collected in these countries are of variable reliability, have often only been collected at small sentinel sites and are rarely digitized. Improvements in the provision of food, water and sanitation remain the top priorities for over two billion people.

### **WHO | Big data in global health: improving health in low ...**

Coordination of data collection efforts becomes complicated in developing countries. Data collection over a large territory by a large team necessitates rigid procedures. If a change is to be made, convincing employees to follow through is difficult once they are already dispersed across a wider geographical area.
