Balance sheet preparation: It's Financial Accounting 101 knowledge that current accounts show up on the balance sheet before non-current ones. For example, current assets like cash list before property, plant, and equipment. However, companies using international standards often list non-current liabilities before current ones.

Intermediate Accounting For Dummies Cheat Sheet - dummies

Example of Current Ratio. If a company's current assets are \$600,000 and its current liabilities are \$200,000 the current ratio is 3:1. If the current assets are \$600,000 and the current liabilities are \$500,000 the current ratio is 1.2:1. Obviously a larger current ratio is better than a smaller ratio.

What is the current ratio? | AccountingCoach

The balance sheet divides liabilities into current liabilities and long-term liabilities. Current liabilities are obligations that (1) are payable within one year or one operating cycle, whichever is longer, or (2) will be paid out of current assets or create other current liabilities. Long-term liabilities are obligations that do not qualify as current liabilities.
