Practical Mr Mammography High Resolution

High-resolution MR mammography is superior to all other breast imaging modalities for the detection of invasive and intraductal breast cancer forms. It plays an important role in the early detection of breast cancer and in the more effective evaluation of breast disease, and has proven to be a reliable method for staging and follow-up after a breast cancer diagnosis.

Practical MR mammography – high-resolution MRI of the breast

Practical MR Mammography is the second edition of this book – the first was published 8 years previously. There have been considerable changes in breast magnetic resonance imaging (MRI) over this time, and these changes are reflected in this new edition, with completely rewritten chapters including technique, methodology, lesion analysis, biopsy, quality assurance, and high-quality images.

Practical MR Mammography: High-Resolution MRI of the Breast, 2nd ed. Uwe Fischer has completed the long-awaited second edition to his original monograph. Fisher is a recognized international expert in breast magnetic resonance (MR) imaging. The original German text, written in 2000 (English version, 2004), provided a foundation that many relied upon to begin clinical breast MR imaging.

We propose a practical approach for performing high-resolution MR lymphangiography (MRL). We shall discuss and illustrate the technical approach for the visualization of lymphatic vessels in patients suffering from lymphedema, how to distinguish lymphatic vessels from veins, and MRL role in supermicrosurgery treatment planning.

MR Lymphangiography: A Practical Guide to Perform It and a ...

High resolution magnetic resonance imaging (HRMRI) has been developed as an emerging tool for evaluating intracranial arterial disease. We aimed to analyze the progression of diseased arterial walls in moyamoya disease (MMD) and further elucidate differences compared to intracranial atherosclerotic stenosis using HRMRI.

High-resolution MR imaging of the arterial wall in ...

Magnetic resonance imaging (MRI) is an emerging technology for acquiring high-resolution images of cortical and trabecular bone in vivo. It is a non-invasive modality and does not require ionizing radiation. Therefore, it is well suited for assessing bone structure in a clinical setting.

High-resolution Imaging Techniques for the Assessment of ...

High-resolution MR imaging of peripheral nerves is becoming more common and practical with increasing availability of 3T magnets. These magnets provide high SNR, which can be used for a quicker acquisition time as well as higher image contrast and resolution.

Although orthogonal axial high-resolution T2-weighted MR images are the cornerstone for the staging of primary rectal cancer, high-resolution sagittal and coronal images provide additional value, particularly in tumors that arise in a redundant tortuous rectum.
