The Dominant Animal Human Evolution

The Dominant Animal: Human Evolution and the Environment. In humanity's more than 100,000 year history, we have evolved from vulnerable creatures clawing sustenance from Earth to a sophisticated global society manipulating every inch of it. In short, we have become the dominant animal.

The Dominant Animal: Human Evolution and the Environment ...

The Dominant Animal tells the story of how mankind came to dominate nearly every inch of the earth. [It] spans the entire history of the world, weaving both cultural and biological evolution into the ambitious narrative. At its core are timely questions we would all do well to consider: Is it in our best interest to dominate Earth?

The Dominant Animal: Human Evolution and the Environment ...

Other animals learn behaviors by imitating their elders. Humans learn behaviors and ideas, via imitation and complex communication. Alas, cultural evolution enabled us to become the dominant animal on Earth, a backhanded honor, sodden with appalling consequences.

The Dominant Animal: Human Evolution and the Environment ...

The Dominant Animal offers readers that knowledge, tracing the interplay between environmental change and genetic and cultural evolution since the dawn of humanity. Tackling the fundamental challenge of the human predicament, Paul and Anne Ehrlich offer a vivid and unique exploration of our origins, our evolution, and our future.

Dominant Animal Human Evolution & the Environment: Paul ...

*Their latest book, The Dominant Animal: Human Evolution and the Environment, continues to drum home the message that humans are on a collision course with ecological catastrophe. But what's new and notable is the dual biological and cultural lens the Ehrlichs use to diagnose the underlying cause of our predicament... the book left me wanting more—hungry for revolutionary new insights whose very existence would shine the right way forward.

The Dominant Animal - Island Press

To track how humans became Earth's dominant animal, Ehrlich began with a photo of a tarsier in a tree. The little primate had a predator's binocular vision and an insect-grabber's fingers. When (possibly) climate change drove some primates out of the trees, they developed a two-legged stance to get around on the savanna.
